

Biology of Sex

BIO 1034

Course Description

This course will be an integrated review of the subject of sex from a scientific viewpoint and yet meant for both science and non-science majors. We will cover all aspects of sex, from genes to behavior and evolution, but from a very objective and scientific perspective.

The goal is to use a topic of general interest to introduce students to the basic tenets of science, how it is performed, how to evaluate it, and how it interacts with society.

▪ **Professor:** Dr. Ignacio Moore

▪ **CLE Area:** 4 - *Scientific Reasoning and Discovery*

▪ **Potential Pathways core outcome:**
Reasoning in the Natural Sciences

▪ **Potential Pathways integrative outcome:**
Ethical Reasoning

▪ **No prerequisites.**

▪ **Contact:** *Dr. Ignacio Moore*
